

# TOXICOLOGY TRAINING ONLINE - 2016

WWW.TOXICOLOGYTRAININGONLINE.COM (£179 + VAT unlimited access)

*"This is a first rate training system and I am finding it extremely useful. The ability to watch the presentations on demand is a real bonus. The handouts and slides are very good too."*

**G.M (Regulatory Affairs), Solvents Industry, UK.**

**Toxicology Training Online** is an ideal product if you would like to/need to improve your knowledge of toxicology, but do not have time to either attend any of my live webinars or a face to face training session.

**The benefit is** that you can select toxicological topics of interest **at times which suit you**; watch the video and read the lecture notes and accompanying handouts. The website is designed to enable you to **"dip in and out"** of different topics as you wish. Furthermore, **live support** by email or phone is also provided should you have any questions related to the material. Furthermore additional material is periodically added to the website at no additional cost to the user.

Toxicology Training Online comprises **over 5 hours of video presentations** accompanied by **lecture notes, copies of the slides and other handouts**; all of which covers the following topics,

# TOXICOLOGY TRAINING ONLINE - 2016

WWW.TOXICOLOGYTRAININGONLINE.COM (£179 + VAT unlimited access)

<b><u>Subject areas</u></b>	<b><u>Description of material covered</u></b>
<b>Exposure &amp; dose</b>	Exposure routes/duration, dose-response concept, NOAELs & LOAELs
<b>Local effects</b>	Irritation and corrosion
<b>Systemic effects</b>	Toxicokinetics, Acute toxicity, Repeated dose toxicity, Carcinogenicity, Genetic toxicity, Chemical allergies, Reproductive and developmental effects.
<b>Target organ effects</b>	The liver, kidneys, nervous system, the respiratory tract, cardiovascular system & blood)
<b>Toxicity testing</b>	Assessment of toxicity, Acute toxicity testing, Repeated dose toxicity testing, Assessment of carcinogenicity, Assessment of genetic toxicity, Reproductive and developmental toxicity testing, Assessment of skin and respiratory allergies, Testing for irritation and corrosion)
<b>Human health risk assessment</b>	Derivation of DNELs, Exposure assessments, etc.

**The material has been written for** anyone who works in in global regulatory compliance, occupational hygiene and medicine, R&D, HSE, Product Stewardship, chemists as well as for business managers involved in Regulatory Compliance/consortia meetings, trade associations, etc. **In fact for anyone who needs a good introductory overview of toxicology.**

**Toxicology Training Online** has been designed to be used on a standalone computer, laptop, iPad or smart phone; which means that if you are away from the office attending a meeting, etc., it is possible to use Toxicology Training Online as a reference guide to help you follow any toxicological discussions being held. It has been **created by a Toxicologist/Chemist** who has many years of practical industrial experience both in regulatory toxicology but also in occupational toxicology and product stewardship.

## **TESTIMONIALS**

*"I have gone through several of the sections of the website and find the content well-written and extremely useful. Also, given my schedule, being able to use the website as time permits is a fantastic benefit!"*

**S.A., Regulatory Affairs, USA.**

*"I like it (the website) because is very succinct, precise and complete in the same time. Many books in toxicology or risk assessment are very long and complex. In order to summarise something it takes some time + as a non-specialist I will never be sure if I summarised correctly. With your slides I am sure about the basics in toxicology and I could start building from that level."* **Regulatory Affairs, Belgium.**

*"I finally completed your entire course and I thought it was excellent. It helped me a lot to understand the underling principals of studies to determine the safety of chemicals used in the classification process. **Three things I thought were helpful in your approach; first** was how you used three different communication methods to explain the material, the videos, the power point slides and the lesson summaries and you said it slightly differently in each so that helped my understanding. **Second** was the list of outcomes at the beginning of each lesson which I used as a test for myself when I finished to see if I got the material. **Finally** was the strong connection to chemical safety which you made in each section. Thank you for your help during the course it was well worth the time."* **Mr James Crotty, Hazard Communication, SDS author, USA.**

If you would like a demonstration of Toxicology Training Online or more information please email or call and I will arrange a mutually convenient time.
